Journal of oral science

Volume 49, Issue 1, March 2007, Pages 75-78

Forced eruption of adjoining maxillary premolars using a removable orthodontic appliance: a case report.

Jafarzadeh, H., Talati, A., Basafa, M., Noorollahian, S.

Department of Endodontics, Faculty of Dentistry, Mashad University of Medical Sciences, Mashad, Iran. <j365@yahoo.com>

Abstract

Forced eruption can be performed in teeth with caries, fracture, resorption or perforation in the cervical third of the root or isolated teeth with one- or two-walled vertical periodontal defects. The purpose of this case report is to introduce an innovative orthodontic appliance which enables forced eruption. This appliance is easy to fabricate, cost-effective and very effective in forced eruption of non-restorable teeth.
